Information for Purchasers

PRICES:—All prices quoted are F.O.B. Nursery.

Freight and express charges are to be paid by the purchaser.

These prices supercede all others and are changeable without notice.

GRADES:—All fruit trees are graded by caliper, 2 to 3 foot trees caliper just above the bud union from 1/4 to 3/8 inch; 3 to 4 foot trees caliper 3/8 to 1/2 inch; 4 to 6 foot trees caliper 1/2 inch and up.

PACKING CHARGES are made to cover the cost of material used.

ERRORS:—Errors or omissions must be called to our attention within ten days after receipt of stock.

TERMS:—Strictly cash. On all orders placed in advance we ask that a twenty per cent deposit be made. Then stock will be reserved for shipment at any later date desired by the purchaser. Interest will be charged on all over-due accounts.

GUARANTEE:—The Macpherson Nurseries exercise great care to have all stock true to name. However, should any stock prove untrue to name we hold ourselves in readiness to replace all such stock or refund the purchase price. But in no case shall we be liable for any sum greater than the amount originally received for said nursery stock.

All orders are accepted with the understanding that same shall be void should injury befall our stock from hail, frost, drought, or any other cause over which we have no control.

All deciduous fruit trees are grown in the foothills on

VIRGIN TREE SOIL WHICH IS FREE FROM NEMATODE AND OTHER COMMON DISEASES.

NUMBER OF TREES NEEDED PER ACRE USING SQUARE METHOD

Distance In Feet	Plants Per Acre	Distance In Feet	Plants Per Acre
10 x 10	435	25 x 25	69
12 x 12	302	30 x 30	48
16 x 16	170	35 x 35	35
20 x 20	108	40 x 40	27
22 x 22	90	50 x 50	17
24 x 24	75	60 x 60	12

PRUNING DECIDUOUS FRUIT TREES AFTER PLANTING

Just after the fruit tree is planted and watered cut the main branch back to within twenty-eight to thirty inches from the ground surface. Cut off all but three to five side branches which should be regularly spaced around the trunk. These side branches should be cut back to three to five buds.

Varieties

Are Listed in Order of Ripening

Apricots

On Peach and Myrobolan Root

Price Each	Each	Per 10	Per 100
4 to 6 feet	50c	35c	25c
3 to 4 feet	40c	30c	20c
2 to 3 feet	30c	25c	15c

ROYAL—The most popular apricot in Southern California. Fruit large to medium size. Skin deep yellow blushed with red. Flesh rich and sweet. A heavy producer. Ripens early in June.

TILTON—One of the best canning varieties. Also used for shipping and drying. Fruit large. Skin orange yellow. Flesh clear yellow, fine grained and very firm. Ripens late June.

MOORPARK—Very large, roundish, deep yellow fruit. Rich and luscious flavor. One of the best flavored apricots grown but a shy bearer. Ripens in July.

Cherries

On Mazzard and Mahaleb Root

Price Each	Each	Per 10	Per 100
6 to 8 feet	60c	45c	35c

3 to 4 feet	40c	30c	20c
2 to 3 feet	30c	25c	15c

STANWICK—Large fruit, skin light green shaded with red. White juicy flesh. Ripens in August.

Peaches

On Peach Root

Price Each	Each	Per 10	Per 100
4 to 6 feet	50c	35c	25c
3 to 4 feet	40c	30c	20c
2 to 3 feet	30c	25c	15c

FREESTONE

BABCOCK—A new peach named after its originator, Mr. E. B. Babcock. Because of its Chinese peach ancestry it is not affected by the warm winters so common in Southern California. The fruit is medium to large, round, with white juicy flesh. Holds up well during Eastern shipments. The skin is almost fuzzless and varies from light to dark pink in color. Ripens middle of June.

Price 10c per tree higher than above list.

MAYFLOWER — Fruit medium to large. Skin greenish white nearly covered with red. Flesh creamy white; fine grained and delicious. Ripens in late May.

ALEXANDER—Fruit medium to large and very uniform, Skin greenish white and partly covered with red. Flesh white, juicy, and sweet. Home use and local market. Ripens in early June.

EARLY IMPERIAL—Medium size with small pit. Yellow skin shaded with red. Flesh yellow, firm, and juicy. Ripens late June to early July.

EARLY CRAWFORD—Very large. Skin yellow with red cheek. Flesh yellow, rich and excellent. Tree very healthy. Ripens in July.

GEORGE THE FOURTH — Large and round. Skin pale yellowish white, juicy, red at pit. Home use. Ripens late July.

ROCHESTER—A fine freestone that ripens from three to four weeks ahead of the J. H. Hale. Fruit large and medium. Skin overspread with red. Flesh yellow, fine grained and firm, a good keeper. An excellent peach for orchard planting. Ripens late July.

LUKENS HONEY—Small greenish white. Flesh white, juicy and sweet. A good bearer. Home use. Ripens in August.

BELLE OF GEORGIA — Large with red blush. Flesh creamy white. Ships well. Ripens early August.

EARLY ELBERTA—Large golden yellow blushed with red. Flesh yellow and juicy. A good bearer. Ripens in late July.

J. H. HALE—Fruit almost round, large to very large, Highly colored with red. Yellow flesh, red at the pit. The leading commercial freestone peach. Ships exceedingly well. Also used for home use local market. Ripens in August.

ELBERTA—Fruit large and rather elongated; blushed with red. Yellow flesh. An old-timer but still one of the best peaches grown. A good bearer. Home use, local market, shipping and drying. Ripens in August.

FAY ELBERTA—A strain of the regular Elberta and resembles it closely. A strong bearer. Ripens in August.

LATE ELBERTA—Very similar to the Elberta but ripens about ten days later.

LOVELL—Fruit large round, and uniform in size. Flesh firm and yellow to the pit. Tree vigorous, and heavy consistent bearer. Home use, local market, shipping, canning and drying. Ripens in August.

LATE CHAMPION—A new introduction from New Zealand. Fruit large and round. Flesh light yellow. Prolific bearer. Good shipper. Ripens early October.

OCTOBER KRUMMEL—Large, light yellow with red blush. Flesh yellow with red at pit. Ripens in late September to early October.

MILLER'S LATE — Best late peach. Large round fruit. Flesh yellow, firm and of good flavor. A heavy bearer. Ripens in November.

CLING PEACHES

TUSCAN — A canning peach of long standing. Large, round fruit, abundantly blushed. Flesh rich and firm. Also used for home use and market. Ripens late July.

PALORA—Fruit large, round, firm, yellow to the pit. Skin rich yellow. A splendid canning peach. Ripens in August.

SIMS—Fruit large and round. Skin yellow and blushed slightly with red. Flesh firm and yellow to the pit which is small. One of the best canning peaches. Also used for home and local market. Ripens middle of August.

WHITE HEATH—Large, creamy white fruit blushed on sunny side. Flesh white, juicy, and sweet. A fine late cling for home use. Ripens early October.

Plums

On Peach Root

Price Each	Each	Per 10	Per 100
4 to 6 feet	50c	35c	25c
3 to 4 feet	40c	30c	20c
2 to 3 feet	30c	25c	15c

CLIMAX—Fruit is quite large, heart-shaped, and a dark red in color. Ripens late June.

SANTA ROSA—Large oval-shaped fruit. Skin purplish crimson with a pale yellow bloom. Flesh yellow mottled with crimson. A juicy, rich flavored fruit. A good bearer. Excellent for shipping. Ripens in June.

FORMOSA—Fruit large heart-shaped uniform in size. Flesh firm, yellow, and juicy. Skin cherry red in color. Ripens in June.

DUARTE—A medium to large sized fruit with skin of deep red color. Firm red flesh of good quality and flavor. A vigorous tree and a prolific bearer. Home use and local market. Ripens in late July and early August.

SATSUMA—Large round fruit with small pit. Dark red skin. Blood red flesh, juicy, firm, and good flavor. A splendid keeper. Home use, local market and shipping. Ripens in late July and early August.

WICKSON—Large, heart-shaped, deep yellow fruit. Flesh firm, juicy, and amber in color. Ripens in August.

PRESIDENT—Fruit uniform, large and egg-shaped. Skin purple with a deep bloom. Flesh yellow and of fine texture. Tree vigorous and a good bearer. Ripens in September.

KELSEY—Fruit very large. Heart-shaped and yellow. Very firm. Adheres slightly to the pit. A good keeper. Ripens in September.

BECKY SMITH—Resembles Santa Rosa somewhat only more highly colored. Freestone. A good shipper. September.

Prunes

On Peach Root

Price Each	Each	Per 10	Per 100
4 to 6 feet	50c	35c	25c
3 to 4 feet	40c	30c	20c
2 to 3 feet	30c	25c	15c

SUGAR—Large oval fruit with dark purple skin and white bloom. Flesh yellow and sweet. Very productive tree. Home use and market. Ripens in late July.

STANDARD—Large oval fruit with dark purple skin, blue bloom. Rich, juicy, amber colored flesh. A very fine fruit for home use and market. Ripens in August.

FRENCH IMPROVED—An old stand-by, medium to large egg-shaped fruit with thin neck and deep purple color. Flesh very sweet and juicy. Ripens in August.

Almonds

On Peach and Almond Root

Price Each	Each	Per 10	Per 100
4 to 6 feet	50c	35c	25c
3 to 4 feet	40c	30c	20c
2 to 3 feet	30c	25c	15c

DRAKE SEEDLING—A strong and a uniform bearer. Nut medium in size and nearly round with medium soft shell.

NONPAREIL—Tree is a strong grower and a regular and heavy bearer. Nut is elongated, and medium size. The kernel is long, fills the shell well and has an excellent flavor. Commands good prices on the market. Should be interplanted with Drake Seedling.

I. X. L.—Tree an upright grower, producing large nuts which are easily hulled. Nut is long, medium size, and a soft shell. Brings the best prices on the market. Should be interplanted with the Drake Seedling.

TEXAS—A heavy and uniform bearer. Small soft-shelled plump nuts. A late bloomer. Pollinizer for Nonpareil and Drake.

DRUMMOND—A seedling grown by Mr. Bruce Drummond at Indio, Calif. Tree a thrifty grower, somewhat drooping. A regular and heavy bearer. Self pollinating. Does well in the interior valleys. The nut is large elongated, medium to soft shell. The kernel is long, sweet, and an excellent flavor. A cross between a California paper shell and Jordan almond.

Price for **DRUMMOND ALMOND**:

Price Each	Each	Per 10	Per 100
4 to 6 feet	75c	60c	50c
3 to 4 feet	60c	50c	40c
2 to 3 feet	50c	40c	30c

English Walnut

On California Black Root

Price Each	Each	Per 10	Per 100
10 to 12 feet	\$1.00	80c	70c
